
ETH TOKEN INTEGRATION DOCUMENTATION

Introduction

The main goal of Crypto Accept is to speed up adoption of crypto payments and give ETH Token projects an immediate use-case for their community. We believe in a decentralized model of operation to ensure there are no extra fees or middle man aside from integration itself. We desire to facilitate a secure fast way for people to accept cryptocurrency payments and enable ETH Token projects to monopolize from this.

Privacy and Anonymity

No KYC bureaucracy to access your funds, no IP association, no identity linking, no transactions tracking. Our servers anonymize your requests by hiding your IP address from prying eyes. Along with this we do not require KYC or any major documentation for ETH Token developers to integrate with our wallet. Integration is done as anonymously as required and we desire to put no hinderance on adoption of our wallet as a decentralized tool of e-payments.

Superb Security

Your private keys never leave your device. Strong wallet encryption and cryptography guarantee that your funds will remain safe under your ultimate control. Hierarchical Deterministic Wallet (BIP44) logic enables you to keep everything both accessible and secure, with one strong passphrase that you'll only have to back-up once.

ETH TOKEN INTEGRATION DOCUMENTATION

Marketing Bonus!

With every integration to our application we are offering a multi-faceted marketing package to help New and Old ETH Token projects garner more community, recognition and awareness.

- **PRESS RELEASES** - We will announce a press release on over 10+ websites for each integration highlighting the token project / website url / main project goals.
- **CCTIP/ TWITTER** - We will launch a ccTip campaign on twitter to garner more followers on your twitter account and recognition of your project to thousands of crypto followers.
- **CRYPTO FORUMS** - We will highlight your integration on over 20+ Crypto forums gaining more recognition.
- **TELEGRAM GROUPS** - We have partnered with influential cryptocurrency groups on telegram to advertise your integration to 100k+ people via multiple telegram groups.

Current Integration Costs

We have aimed through diligent research to find the lowest price-point feasible for ETH Token projects while retaining a workable model for development and growth of Crypto Accept. For instance other wallets like Coinomi are in excess of 20 ETH for integration. Atomic Wallet 10+ ETH, and many other commerce solutions 5 ETH+.

Description	Unit Price
ETH TOKEN INTEGRATION + MARKETING	1 ETH

Simple Requirement to Integrate

Aside from the payment sent, your ETH Token project will be required to be listed to CoinGecko.com We have partnered with them via their API to be able to pull all data automatically (including logo, etc). So if you have not listed with them, it is very simple and straight forward at the footer of their website.

Sending Payment

1) SEND PAYMENT - 1 ETH TO: 0xe32Fa8Fdf209d47131Cea7d3e4d2CDc95c4a85f9

2) VERIFICATION - Once the payment is sent, send us the TXID (transaction ID) within 30 minutes to either our email or telegram username, or both. We verify and add projects usually within 1-2 hours or maximum 10 hours.
